Allowable Subject Matter

Claims 31-53 are allowed.

The following is an examiner's statement of reasons for allowance:

Instant claims are directed to a method of reducing photodamage to skin cells or a method treating photodamaged skin, resulting from the exposure to electromagnetic or ionizing radiation, comprising administering a composition comprising selegiline and/or desmethylselegiline. Selegiline is known for reducing neuronal apoptosis, particularly for Parkinson's disease, which is mediated by a principal metabolite of selegiline i.e., desmethylselegiline. The prior art of record while recognizing that apoptosis is associated with photoinduced or chronological aging, does not provide any correlation that a reduction or inhibition of apoptosis leads to successful inhibition or reduction of photodamage. In certain instances, the art suggests that apoptotic agents and not anti-apoptotic agents can treat photodamage. Therefore, one of an ordinary skill in the art would not have reasonably expected that all anti-apoptotic compounds, including selegiline, to be effective in treating or reducing photodamage to skin cells.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
